

Prof. Henry Lam receives Teaching Excellence Appreciation Award at SENG 2019-2020

12-Oct-20

We are pleased to announce that Professor Henry Lam has been awarded the 2019-2020 Teaching Excellence Appreciation Award in the School of Engineering. This distinguished award is one of the highest forms of individual recognition for teaching excellence at the School of Engineering and requires extraordinary efforts to attain.

There are very few recognised awardees each year as nominees need to undergo a rigorous selection process from stakeholders of all facets. Professor Lam has excelled with his all-rounded skill sets through his innovation in the “flip learning mode” pedagogy in Chemical and Biological Engineering Thermodynamics and the introduction of a new core subject, Modelling for Chemical & Biological Engineering, which has now served as the building blocks for the required learning outcomes for CBE’s major programs. These extraordinary achievements, together with the around-the-clock attention given to his students outside of class, have won the hearts of students, as seen in his distinctive teaching evaluation results for the past three years. Immensely passionate as an educator, he has a vision of being the “architect” for the design of a new curriculum that benefits and nurtures the leaders of tomorrow.

"Congratulations to Prof. Lam for this well-deserved recognition. We need great team players to create a difference and a brighter future." said Prof. I-Ming HSING, Head of CBE.
