

Prof. Terence WONG has been awarded “Honorary Mention” at the 2020 Common Core Teaching Excellence Award by the University.

Prof. Terence WONG, from CBE, has been awarded “Honorary Mention” at the 2020 Common Core Teaching Excellence Award by the University. As part of the undergraduate curriculum, the Common Core Program acts as the fundamental building block for fostering students to become independent intellects and responsible citizens. This award is presented each year to recognize outstanding common core course instructors who have made substantial contribution to the design and/or the teaching of exemplary common core courses.

In every aspect, Prof. Terence WONG has revived and implemented BIEN 1010 Introduction to Biomedical Engineering successfully. This course has not only fulfilled all the attributes of the ABC Live pedagogy of a common core subject, but it has also gone beyond expectation in evoking students’ passion in bioengineering and, more importantly, in facing challenges. While this course comprises intensive quizzes, course work, and required tremendous class participation, Prof. WONG has introduced the special scheme and teaching tactics to encourage communication and create bonding with his students with an excellent result; an enrolment rate exceeding the school’s pre-determined quota every year.

“By turning challenges into aspiration during the learning process successfully demonstrates Prof. WONG’s belief that the best propeller for learning is self-motivation! This is an exemplary course for our learners and educators, I wish to echo this spirit to our team. Above all, I rely on your support for more innovations and breakthroughs in the years to come. Let us grow together and please join me to send the warmest congratulations to our well-deserved member, Professor Terence WONG!” said Prof. I-Ming HSING, Head of CBE.
